MYTHBUSTERS

MYTH 1

YOU ONLY USE 10% OF YOUR BRAIN.

TRUTH:

Actually we use **100%** of our brains, it's just **10%** are neurons & **90%** are glial cells which support neurons.

MYTH 2

IF YOU SWALLOW CHEWING GUM, IT TAKES 7 YEARS FOR IT TO WORK ITS WAY THROUGH YOU.

TRUTH:

Although the base of chewing gum is largely **indigestible**, while the additives can be digested, it will pass through the human system without causing any harm.

MYTH 3

HUMAN BLOOD IS BLUE BEFORE THE AIR TOUCHES IT.

TRUTH:

Deoxygenated blood is very dark **red**, almost black, but it appears **blue** due to the depth of the veins, as well as other factors such as **light**.

MYTH 5

A COIN DROPPED FROM A SKYSCRAPER WOULD KILL SOMEONE.

TRUTH:

Only if the coin is dropped through a very long container devoid of all gas. Otherwise, air resistance will match gravity and the coin would not accelerate beyond a certain speed dependent on its weight and other factors.

MYTH 4 DADDY LONGLEGS HAVE THE STRONGEST VENOM IN THE WORLD, BUT THEIR FANGS AREN'T STRONG ENOUGH TO PIERCE HUMAN SKIN.

TRUTH:

'Daddy longlegs' is a catch-all term that has been applied to **crane flies** and **numerous arachnids**. Some are not **venomous** at all, and even those that are do not come close to the **deadly** power of creatures such as the **Brazilian wandering spider** and the **inland taipan**.

e , through the air], not via cellular phone connections)It's possible this method might work with cars that use something different than standard RKE systems, but it doesn't work with the vast majority of models.. There are many videos and articles online purporting to demonstrate ways to use your cell phone to unlock a car door.

(In any event, RKE systems and cell phones typically operate on completely different frequencies; the former in the 300 MHz range and the latter in the 800 MHz range.. Dec 29, 2006 Never worry about locking your keys in your car again Have the signal from your spare set of keys sent through your cell phone to unlock your door.. Your car will unlock and it works Saves someone from having to drive your keys to you.. You simultaneously point the cell phone at your car door, and voila — you're in! A nifty solution ... at least it would be if it weren't implausible for most standard remote entry systems.. FALSEExample:[Collected on the Internet, 2004]This only applies to cars that can be unlocked by that remote button on your key ring. [Download Bluetooth Driver For Windows 8.1 Asus](#)

But what if you accidentally lock your remote entry device in your car along with your keys? (A plausible scenario, as many people carry them together on the same keyring.. Every car, even luxury cars, that don't have a visible key slot are still required to have a key slot as a failsafe in case of electrical failures.. RKE systems are handy for a number of reasons: they enable drivers to unlock car doors without having to fumble around for keys (a great advantage in darkness, during inclement weather, and when one's hands are full), they enable car owners to give someone else access to their vehicles without having to hand over ignition keys, and they provide a means by which motorists can open their cars to retrieve keys that have been locked inside.

Unlock Car With Cell Phone Mythbusters For CashUnlock Car With Cell Phone Mythbusters VerizonUnlock Car With Cell Phone Mythbusters OnlineClaim: Any car equipped with a remote keyless entry system can be unlocked via cell phone.. One video, for example, suggests that you can hold a phone near your car while someone else uses a spare key to send the unlock signal via a phone call.. Distance is no object You could be hundreds of miles away, and if you can reach someone who has the other "remote" for your car, you can unlock the doors (or the trunk, or have the "horn" signal go off, or whatever!)Origins: Most new cars now come equipped with "Remote Keyless Entry" (or "Keyless Remote" or "Keyless Entry" or "Remote Entry") systems (also known as RKE systems), a mechanism which allows automobile owners to lock and unlock their car doors remotely (from up to about 300 feet away) by pressing buttons on transmitting devices small enough to be carried on keychains..)(More than a few people have inadvertently fooled themselves into believing the cell phone method of unlocking car doors actually works because they tried it and achieved the desired results — not realizing their cars were still within range of their keyless remote devices, and the signals that unlocked the doors were transmitted the usual way [i.. Relaying remote entry system signals via telephone might work if the signals were sound-based, but they're not.. Enter the idea of the poor man's OnStar No need to pay for a fancy car-unlocking service: just use a cell phone to call someone who has access to your spare RKE device and tell him to point it at the phone and press the "UNLOCK" button..) If you own a car equipped with a system such as OnStar you can contact an operator and have OnStar unlock your vehicle remotely through a signal sent via a cellular network, but otherwise you have to call a locksmith or get a friend or relative to bring an extra set of keys out to you.. Should you lock your keys in the car and the spare keys are home, and you don't have "OnStar," here's your answer to the problem!If someone has access to the spare remote at your home, call them on your cell phone (or borrow one from someone if the cell phone is locked in the car too!)Hold your (or anyone's) cell phone about a foot from your car door and have the other person at your home press the unlock button, holding it near the phone.. An RKE system transmits an encrypted data stream to a receiver inside the automobile via an RF (radio frequency) signal, a signal that can't be effectively relayed via cell phone. cea114251b [Os-X Messages Google Talk Talk.Google.Com 2017](#)
